

BT-Watzke

A company steeped in tradition

The Watzke capsule factory was founded in 1892 and became the industry's premium manufacturer in Europe thanks to the commitment of all employees. There isn't a single manufacturer anywhere in the world that produces the complete range of its products and materials from bottle capsules to the rotary closures in a single location. In addition, the firm's in-house machine construction not only enables maintenance without prolonged downtimes, but also continuous improvements and expansions of the production possibilities.

This unique interplay allows us to supply customers with everything from low-cost shrink capsules to the highest-quality tin capsules for magnum bottles from a single source. As a possible option in between, capsules made of poly laminate film or aluminium are drawn seamlessly. We also have high-quality solutions for sparkling wine and champagne bottles. For more than a decade now, we have been offering our vinotwist, a quality screw cap 30 x 60 mm BVS with a wide range of decoration options: from screen and offset printing to spray-painted closures with a high-quality finish to hot foiling and raised embossing, no wishes remain unfulfilled. Important to know for smaller productions or special editions: We offer the whole range of equipment from a minimum quantity of one box!

With more than a century of tradition in capsule production and training our young employees in internal machine production for at least 4 years, we employ true experts in production and service. This enables us to always be at the cutting edge and to offer our customers perfect solutions for their packaging!
